                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 71 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This cDNA encodes a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP angibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic can be used to treat disorders, such as a cardiovascular or fibrotic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          administering to the subject an agent that modulates the expression or CC activity of (S). (I) have osteopathic activities, and can be used to modulate the expression of OST 1-48, and can also be used in gene cC modulate the expression of OST 1-48, and can also be used in gene cC therapy. (M1) is useful for identifying parathyroid hormone receptor (149ands (I) or osteoregenerative agents. OST gene sequence can be used (C for assessing the osteoregenerative activity of a test agent in a CC subject, and for diagnosing or determining the susceptibility to bone (149ands) and assessing efficacy of a treatment of a bone disorder in a CC subject, human or rodent. (M2) is useful for treating a bone disorder (e.g. CC osteoporosis, osteopenia and osteopetrosis). OST polypeptides are useful CC as immunogens to raise anti-OST antibodies (II). Parathyroid hormone (149ands (I) identified by (M1) are useful for treating bone CC disorders. The present sequence represents an OST23 gene fragment (CC isolated from rat tibiae, from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. Cc The oligonucleotide libraries are useful for detecting mRNAs from a cc biological sample, in expression profiling studies, in qualitatively or cc quantitatively characterising the corresponding transcriptome, and in cc detecting RNA transcripts and splice variants of human or animal cc transcriptomes. The libraries may also be used as specialised mini cc particular biological or pathological state, and so allowing the cc particular biological or pathology-specific genes such as those genes condition; to detect developmental specific pathological condition; to detect developmental specific genes such as those genes condition; to detect developmental specific genes; and to detect RNA cc transcripts and splice variants of a transcriptome of a particular disorder. ABN27253 to ABN59589 represent coligonucleotide sequences from rats, humans and mice, which are used in the sequence data for this patent did not form part of the printed constraints, but was obtained in electronic format directly from WIPO cat from wince the pathological pathological or the printed constraints of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes Wnt-1 induced secreted polypeptides, CC WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-2, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF). CC and WISP-3 have homology to connective tissue growth factor (CTGF). CC Products from the present invention can be used to treat WISP-related CC disorders such as breast, ovarian, and colon cancer or melanoma. The CC products can be used to treat arteriosclerosis. The products can also be CC used to treat other diseases e.g. benign and malignant tumours, CC leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, CC hypothalamic and other glandular, macrophagal, epithelial, stromal, and CC hypothalamic and other glandular, macrophagal, epithelial, stromal, and CC disorders, skin disorders, haematopolesis-related disorders, kidney CC disorders, bone-related disorders fibrotic lesions, kidney CC disorders, bone-related disorders such as osteoporosis, trauma such as CC burns, incisions, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, CC catabolic states, testicular-related disorders, and inflammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                     Chlamydiaceae family; chronic infection; persistent infection; pyk; nlp Cpn0585; regulatory pathway; biosynthetic pathway; ompA; ompB; hsp60; lipopolysaccharide; cardiovascular system; respiratory tract; therapy; genital tract; reproductive system; atherosclerotic tissue; macrophage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock-out animals. Antibodies can be used to induce death in WISP-1, 2 or 3 overexpressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 1999-337420/28

them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as catherosclerosis, coronary artery disease, carotid artery stenosis, myocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of Chlamydia pneumoniae, and the nucleic acids may be used in the detection of Chlamydia pneumoniae, and the nucleic acids may be used in the detection of Chlamydia pneumoniae, and the nucleic acids may be used in the detection of chlamydia pneumoniae gene expression. The present sequence represents a specifically claimed DNA which encodes a Chlamydia pneumoniae protein of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best Lo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia-specific T-cell response or inhibiting the development of a Chlamydia infection in an animal. Methods from the present invention can be used: for detecting the presence of Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia protein; and for treatment of a Chlamydia infection. ABL92394 to ABL92709 and ABB94096 to ABB94374 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes compositions comprising a Chlamydia Capl protein and methods for the diagnosis and therapy of Chlamydia infection Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in

The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/virolds, pathogenic on humans, animals or plants) or against cytokine, 1d, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang increases stability and thus intracellular concentration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for inhibiting expression of a target gene (ABL91658-ABL91797) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at

CC The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with activating peptide factors and malignancies, such as stimulating and cactivating peptide factors and transmitters, thanscription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, binding receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, binding proteins and malignancy associated proteins. The artisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially summarry obstruction and/or lung inflammation, allergy(ies) and or protein are associated with a disease or condition selected from nulmonary was constituted in the activities and disease or condition selected from nulmonary was constituted in the selected from 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive cpulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONS reduces side effects. The A-containing ONS break down with the crelease of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present the invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences convention. N.B. Sequences given in the disclosure of the present invention to AAA3392) are specifically claimed ONS from the present convention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the disclosure of the present convention when the previous convention the present convention where the previous convention are specifically claimed one that the disclosure of the present convention when the previous convention are specifically claimed one that the sequences given in the disclosure of the present convention the present previous convention and the previous convention are specifically claimed one that the sequences given in the disclosure of the present convention are specifically sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired alivways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The antisense oligonucleotides are useful for modulating the expression of human PKC-delta in cells or tissues, especially adipose tissues which express human PKC-delta, for inhibiting hyperproliferation of cells and treating or preventing an abnormal proliferative condition such as leukemia. They are also useful for reducing an inflammatory response of human cells and treating an animal having a disease or condition associated with tumour necrosis factor-alpha (TNT-alpha), especially overexpression of TNT-alpha, such as inflammatory or autoimmune disease or a condition which is infectious, diabetes, inflammatory bowel disease, multiple sclerosis, pancreatitis, rheumatoid arthritis, hepatitis, atopic dermatitis or allograft rejection and for reducing the blood glucose level in a human. The present sequence represents the cDNA encoding the human PKC-delta polypeptide.
                                                                                                                Chlamydia
                                                                                                                                                                                                                                                                                                                                      3901/c

The membrane-rich polynucleotide and polypeptide are useful for preventing or treating Chlamydia infection, such as community pneumonia, upper respiratory tract infections, bronchitis and sinusitis. They are also useful for diagnosing Chlamydia infection by assaying a body fluid of a mammal. The polypeptide is useful for vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotides encoding a 60kda from Chlamydia, useful as a vaccine Chlamydia infection in mammals -

proxaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are CE Escherichia coli, Staphylcoccus aureus, Salmonelia typhi, Klabsiella CC invention is also useful for the identification of potential new targets of invention is also useful for the identification of potential new targets to identify proteins used in proliferation, to express these proteins. CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in intional drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

CC a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

CC note: The sequence data for this patent did not form part companies the protection of the printed specification, but was obtained in electronic format directly from WIPO at the process of the printed specification in the companies of the printe

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mimetics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunoglobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of [1] in a sample indicates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. (I) and (II) are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a predisposition to a disorder where the gene is associated with a

Low adenosine (A) content antisense oligonucleotides which trigger adenosine receptors during metabolism, useful e.g. cancers and respiratory obstructions -  ${\sf cancers}$ 

do not

treating

```
CC The present invention describes low adenosine (A) content antisense CC oligonucleotides and compositions (I) comprising them. In the antisense CC oligonucleotides the A is replaced by a 'Universal' or alternative base. CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, communosuppressive, antiasthmatic, hypotensive and cytostatic activities. CC The antisense oligonucleotides and (I) can be used to down-regulate the CC expression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CC activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokines, endogenously produced specific and non-specific enzymes, CC binding proteins, adhesion molecules and their receptors, cytokine and CC chemokine receptors, adenosine receptors, bradykinin receptors, cytokine and CC receptors, CNS and peripheral nervous and non-nervous system peptide CC transmitters, defensins, growth factors, vasoactive peptides and CC receptors, binding proteins and malignancy associated proteins. The CC including respiratory obstruction (especially pulmonary obstruction and/or lung inflammation, allergyies) CC and/or surfactant hypoproduction which are associated with a disease or CC condition selected from pulmonary vasoconstriction, inflammation, condition selected from pulmonary vasoconstriction, inflammation, condition, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary CC pulmonary transplantation rejection, pulmonary infections, bronchitis, cand/or cancer. AAF18434 to AAF21543 represent human polynucleotide condition of the present human polynucleotide conditions.

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Steven P. Fling

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT AND TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

FILE REFERENCE: 210121.469C7

CURRENT APPLICATION NUMBER: US/09/620,412C

CURRENT FILING DATE: 2000-07-20

NUMBER OF SEQ ID NOS: 363

SOFTWARE: FASTSEQ FOR Windows Version 3.0/4.0

SEQ ID NO 25

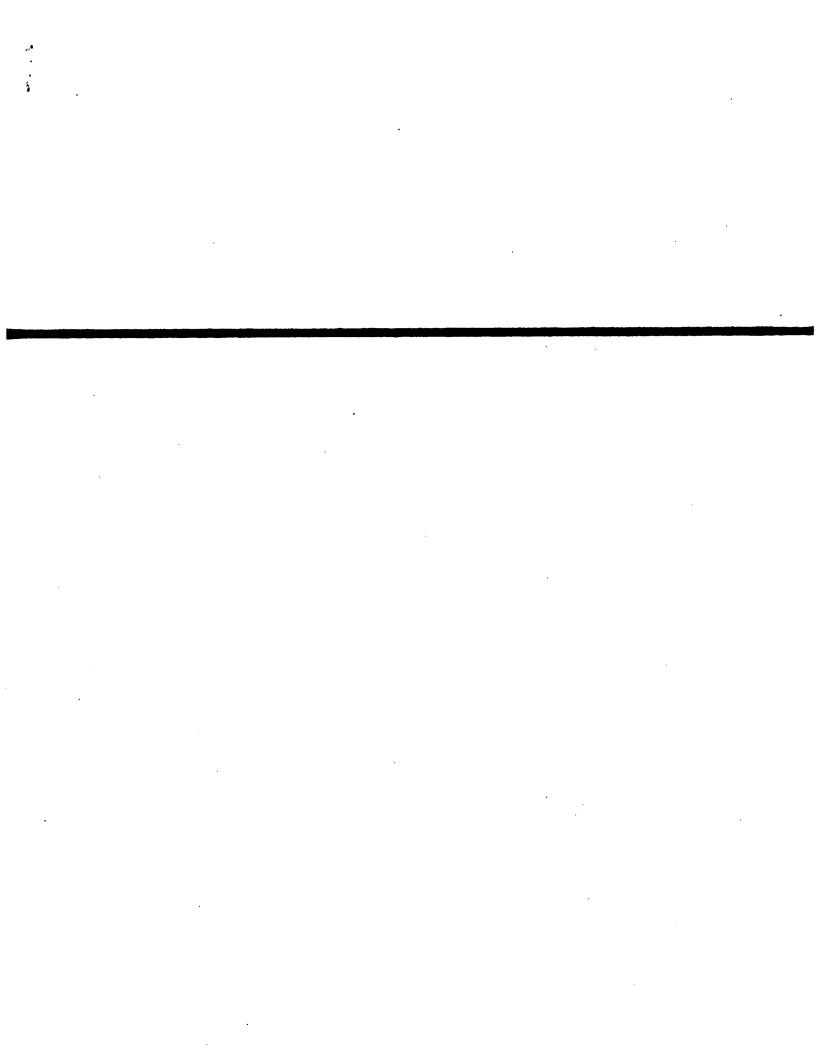

SEQ ID NO 25

LENGTH: 696

TYPE: DNA

ORGANISM: Chlamydia trachomatis

                     bladder, normalized rat curvix, normalized rat brown adipose, normalized rat tundus, and normalized rat brown adipose, normalized rat tundus, and normalized rat trace rat salivary gland. It was constructed according to the procedure described by Bonaldo, Lennon & Soares (Genome Research Genome 6: 791-806, 1995). For construction of the CNI library, plasmid DNA from the pool of normalized libraries was electroporated into completent backeria for the production of single-stranded circular DNA. This was then used as a tracer in a subtractive hybridization with a driver population. By a pool of about 34,000 clones from the final driver population. By a pool of about 29,000 clones from subtracted libraries CAO-BAS, R-CAO-BAS, R-CAO-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /lab_host="DHIOB (Life Technologies)"
